

## HIGHFIRE RISK PROJECT

# BLOW-UP FIRE EVENT (BUFE) POTENTIAL SOUTH-EAST AUSTRALIA

## --The Hierarchical Predictive Framework--

Level 1: ■; Level 2: ■

This page shows current Alerts  
for Blow-Up Fire Event  
potential.

**ISSUE DATE:** Current daily SSTA charts  
(NOAA Coral Reef Watch)  
**29**

**DECEMBER  
2024.**

River flows updated 5 January.

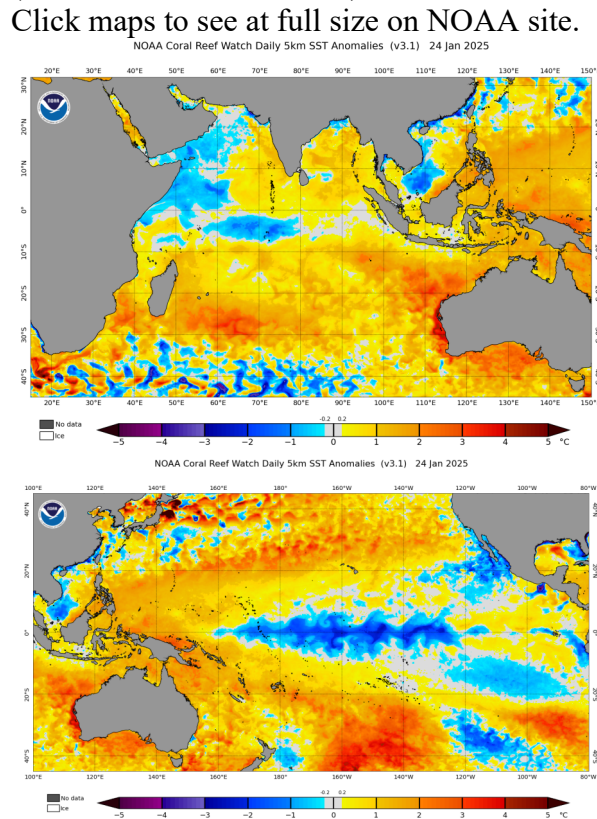

This is an Operational Tool.  
It is an intelligence product to  
aid in informed decision  
making, and should not be  
used in any other way.

## A REQUEST

If anyone uses this model  
operationally, can they please  
send their results to the author:

# LEVEL 1 CANBERRA DIPOLE

Current Alert Status:

**AN ALERT IS IN PLACE.**

This reflects interactions between land and sea that influence synoptic patterns conducive to wildfires (or rain).

Data:

- Sea Surface Temperature Anomalies (SSTAs) - [NOAA Coral Reef Watch](#);
- Land Temperature Anomalies (LTAs) & River flows - [Bureau of Meteorology](#);
- PyroCbs - [Australian pyroCb Register](#).

[Click on image to enlarge.]

ANALYSIS: An alert is in place.

# LEVEL 2 RIVER DRYING EVENTS

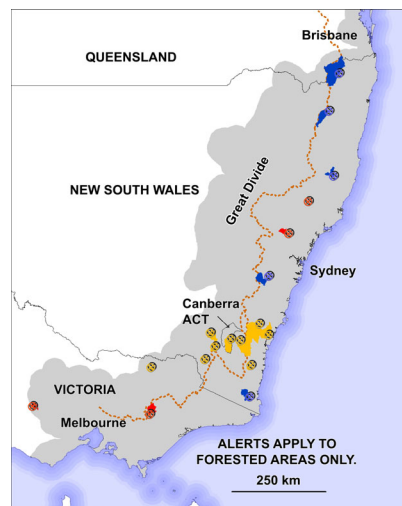

Current Alert Status:

**AN ALERT IS IN PLACE.**

ANALYSIS: The developing flash drought was cancelled by significant rains. Only the Hunter Valley and Western Victoria retained dryness. Subsequent hot, dry weather is reducing a number of river flows. With four low flows now in place an alert is issued.

There is an alert in place.

## LEVEL 3 BLOW-UP FIRE OUTLOOK

It is recommended that FBANs and other technical specialists learn more about BUFEs. Operations at Level 3 require use of the BUFO2 model to assess the potential for a BUFE during an on-going fire. This requires a series of data feeds specified in the model. It is suggested that FBANs should skill-up on using the BUFO2 model.

Could anyone using the spreadsheet during the HPF trail please copy their results to us.

## BASIS

This work is based on both analyses of data from Black Summer and operational work. The structure of the four-tier Hierarchical Prediction System is designed to progress into smaller-scales of timeframe and function, shifting from seasonal outlook to incident operations:

**HPF is described in a [peer-reviewed paper](#) in the October 2023 edition of the Australian Journal of Emergency Management. A follow-up [paper](#) reports on HPF performance in the following year.**

## LEVEL 2 SOURCE DATA

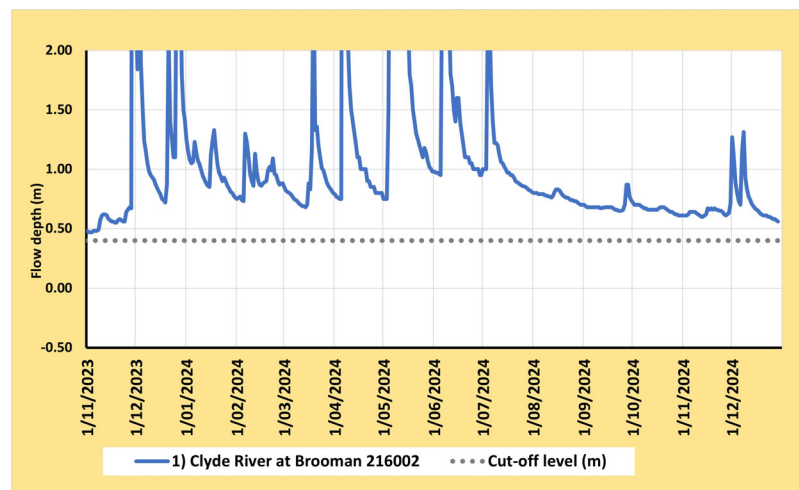

The table and map below describe the stream flow reference sites used.

- A new site 18 has been added - near Ararat in Victoria to represent dryness north-west of Melbourne.
- These plots are of data from the Bureau of Meteorology (BoM) and WaterNSW (<https://realtimedata.waternsw.com.au/water.stm>).
- These sites do not reflect risk to life or property, rather they are from streams with long records that are not dammed or otherwise significantly modified, and are intended to reflect underlying hydrological dynamics. Elevated levels or concave drying trends indicate wet landscapes. Near minimum flows or low flows decaying in a convex curve are indicators of a River Drying Event.
- Note that minimum flows are not zero flows - the value reflects the circumstances at the flow measuring station.
- Also note that many catchments burnt out during Black Summer, and this may cause anomalous flow dynamics.
- There are occasional disruptions to data provision, causing gaps in the graphs. These may be removed as datasets are updated.

1. Clyde R at Brooman (site ID 216002)  
Min. level = 0.40 m.

2. Macdonald R at Howes Valley (site ID 212021)

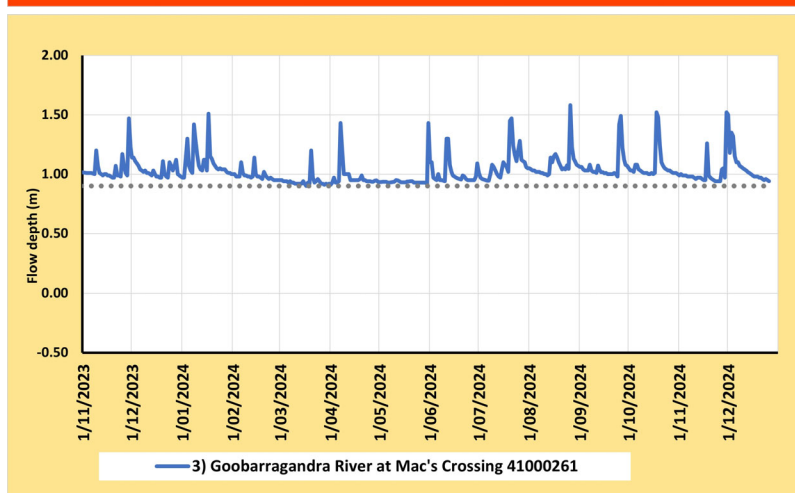

Min. level = -0.10 m.

This site has questionable data - the river is notorious for silting up after major wildfires.

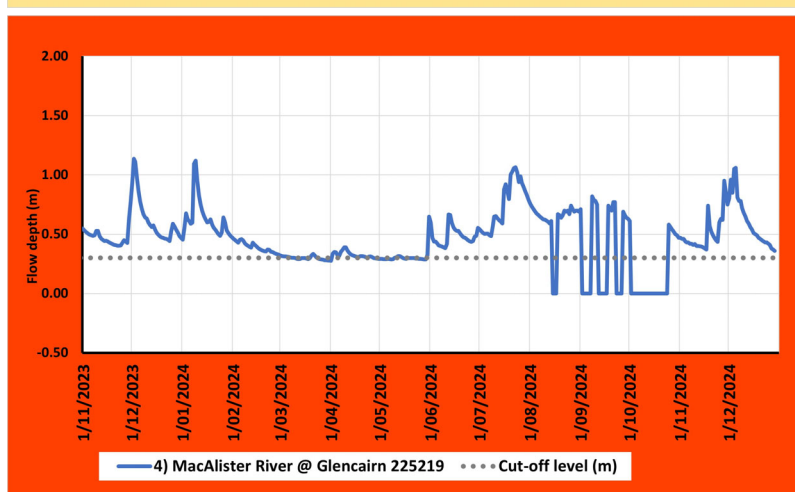

3. Goobarragandra R at Macs Crossing (site ID 41000261)

Min. level = 0.90 m.

4. Macalister R at Glencairn (site ID 225219)

Min. level = 0.30 m.

5. Towamba R at Towamba (site ID 220004)

Min. level = 0.35 m.

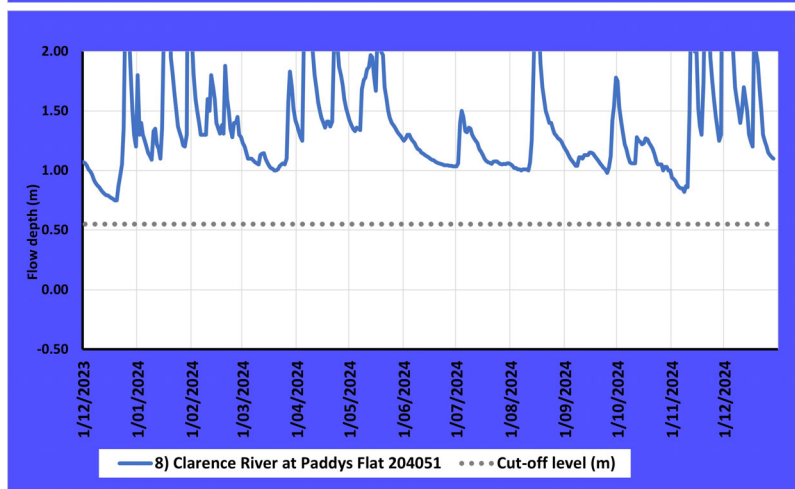

6. Kowmung R at  
Cedar Ford (site ID  
212260)  
Min. level = 0.40 m.

7. Mann R at  
Mitchell (site ID  
204014)  
Min. level = 0.20 m.

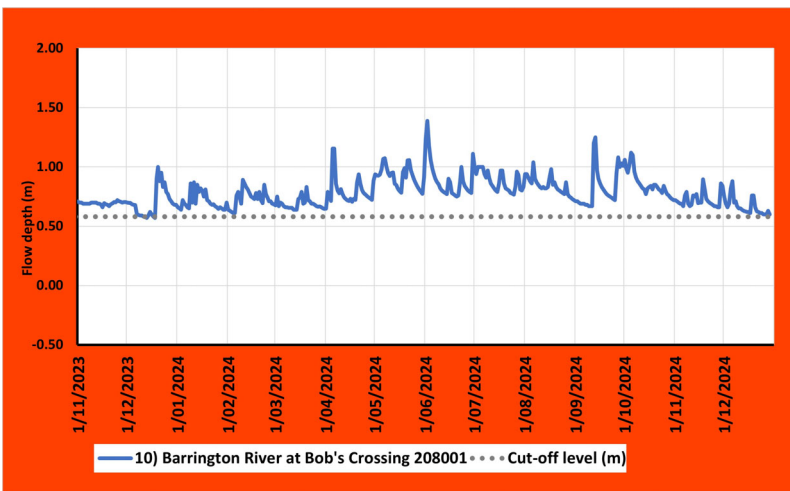

8. Clarence R at  
Paddys Flat (site ID  
204051)  
Min. level = 0.55 m.

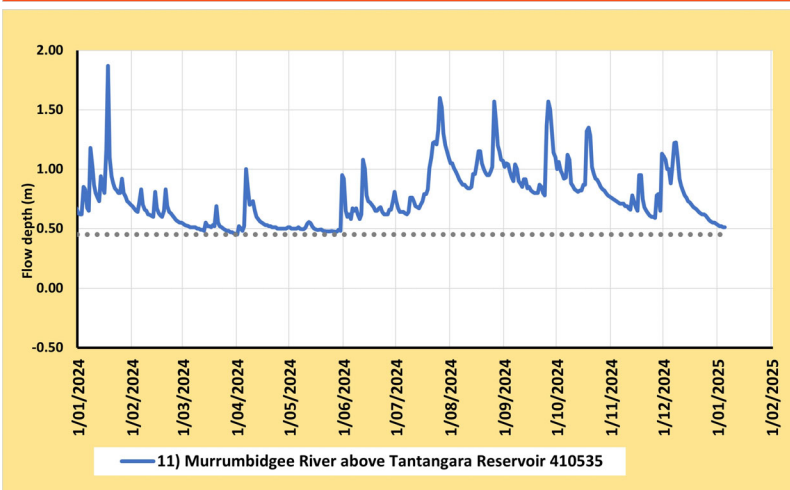

9. Hastings R at Mt  
Seaview (site ID  
207015)  
Min. level = 0.55 m.

10. Barrington R at  
Bobs Crossing (site  
ID 208001)  
Min. level = 0.58 m.

11. Murrumbidgee R  
above Tantangara  
Reservoir (site ID  
410535)  
Min. level = 0.45 m.

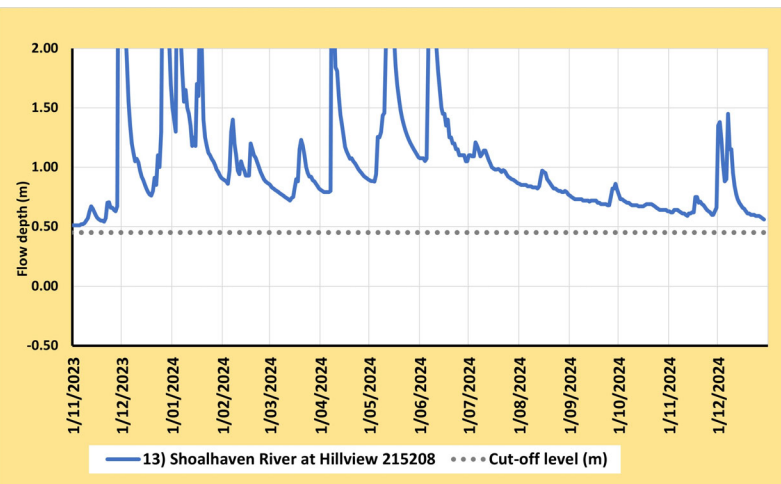

12. Tooma River at  
Pinegrove (site ID  
401014B)  
Min. level = 0.88m.  
The Federal  
Government has  
gazetted the  
previously used site  
(Tooma R above  
Tooma Reservoir,  
site ID 401554) as a  
Commercially  
Sensitive Site under  
the Water  
Regulations 2008. It  
has been removed  
from this page.

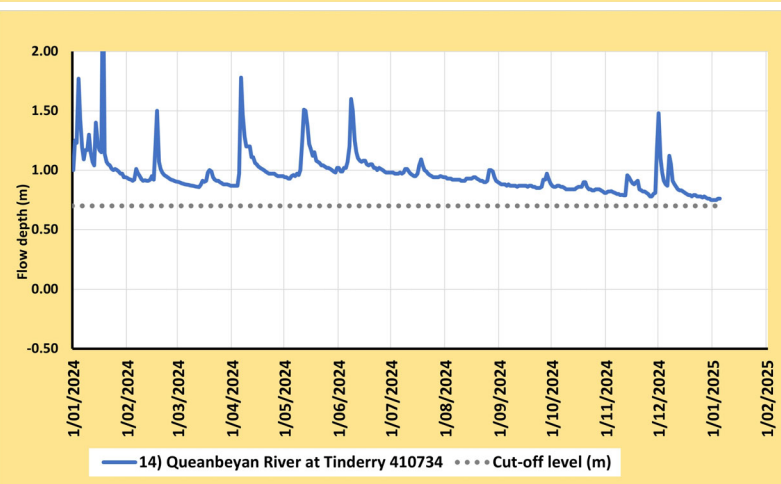

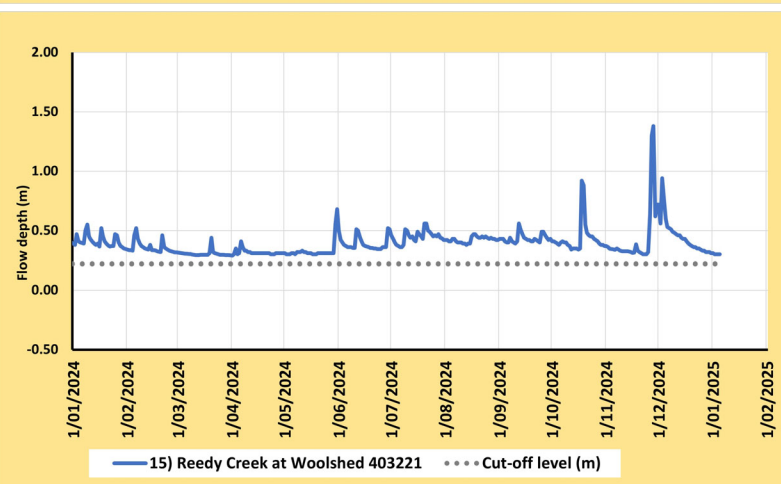

13. Shoalhaven R at Hillview (site ID 215208)  
Min. level = 0.45 m.

14. Queanbeyan R at Tinderry (site ID 410734)  
Min. level = 0.70 m.

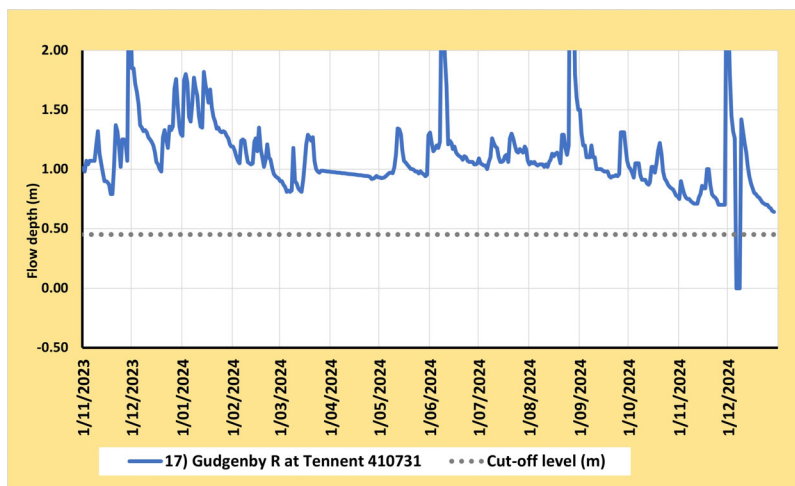

15. Reedy Creek (site ID 403221)  
Min. level = 0.22 m.

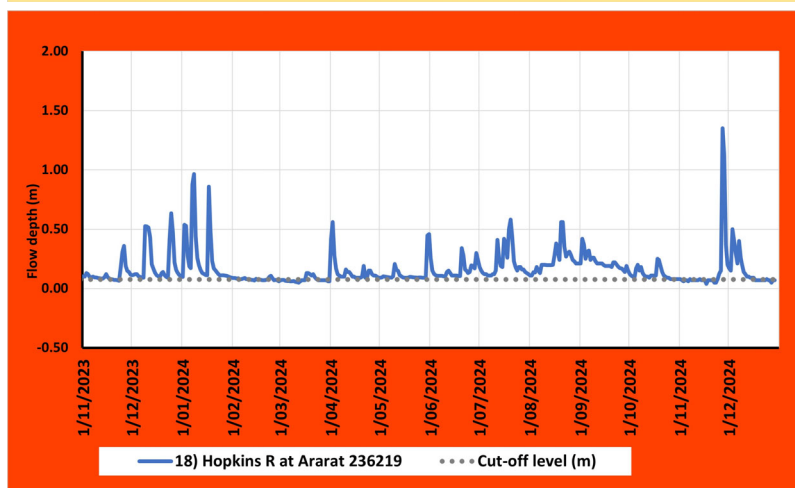

16. Wadbilliga R at Wadbilliga (site ID 218007)  
Min. level = 0.75 m.

17. Gudgenby R at  
Mt Tennent (site ID  
410731)  
Min. level = 0.45 m.

18. Hopkins R at  
Ararat (site ID  
236219)  
Min. level = 0.075 m.
